

```

356 \let\DPSIndxList\@empty
357 \let\DPSNamesList\@empty
358 \def\randomizePicMappings{\def\bRandPicMaps{true}}
359 \def\bRandPicMaps{false}

```

`\sortPicMappings` Pictures are randomly placed in the sideshow and the bubble sort is used to sort them out, as a final event when the puzzle is solved. This command does nothing if the `usebtnappr` option is not taken; that is, this is a feature of the `usebtnappr` option.

```

360 \ifusebtnappr
361   \def\sortPicMappings{%
362     \InputIfFileExists{sortjs.def}{-}{-}%
363     \OpenAction{\JS{try{if(!hasBeenRandomized)
364       {hasBeenRandomized=true;mixupDPS();showDPS();}
365       }catch(e){}}}%
366   }
367 \else
368   \let\sortPicMappings\relax
369 \fi

```

`\sideshowPackaged` The side show pictures are packaged into a single PDF, the order of the pages are as expected. The default is they are not packaged. It is assumed the filename is `<basename>.package.pdf` (When in a package, the pictures must be in a PDF file).

```

370 \newif\if@isPackaged \@isPackagedfalse
371 \def\sideshowPackaged{\@isPackagedtrue}

```

6 Questions and Answers

`Composing` This is the environments in which the composing of questions and answers are made. Use the `cQ` and `cA` for this purpose.

```

372 \newenvironment{Composing}
373 {\global\ds@qNumber=0 \global\ds@aNumber=0}
374 {\aftergroup\ds@publishRandomLists}

```

Here are the two environment (`cQ` and `cA`) for composing questions and answers. The argument of each environment corresponds to a form field in the puzzle. Each of these environments are verbatim write environments; they write each question and solution to a separate `.cut` file. These individual files are ultimately input in a random order. A typical pair of environments looks like these two:

`cQ` Sets the content of the question.

```

375 \newenvironment{cQ}[1]
376 {%
377   \global\advance\ds@qNumber\@ne
378   \immediate\openout \ds@question@write \jobname_q\the\ds@qNumber.cut
379   \let\verbatim@out\ds@question@write\set@display@protect
380   \dps@IWV0{\protect\dpsQ{#1}}%

```

```

381 \set@typeset@protect
382 \verbatimwrite
383 }{%
384 \endverbatimwrite
385 \immediate\closeout \ds@question@write
386 }

```

The `cA` environment has an optional argument. This optional argument is only used when the document is compiled with the `showletters` option. The value of the argument is a letter to appear in the answers column. Normally, first entry of the argument pair `{\letter}{\name}` of `\DeclarePuzzle` is used. Cases where you would want to include this optional argument are (1) when giving an answer that does not correspond to a question; (2) the letter is capitalized, suggesting a proper name or the beginning of a sentence, use the optional argument to list the letter in lower case. The latter case is common, for example,

```

\begin{cQ}{H}
  Who wrote this package?
\end{cQ}
\begin{cA}[h]{H}
  D.P. Story
\end{cA}

```

The capital ‘H’ begins the puzzle, but we don’t want the player to see a capital ‘H’ if the `showletters` option is taken.

`cA` Sets the contents of the answer.

```

387 \newenvironment{cA}[2][ ]
388 {%
389 \def\argi{#1}\global\advance\ds@aNumber\@ne
390 \immediate\openout \ds@question@write \jobname_a\the\ds@aNumber.cut
391 \let\verbatim@out\ds@question@write
392 \set@display@protect
393 \dps@IWV0{\protect\dpsA\ifshowletters
394 \ifx\argi\@empty\else[#1]\fi\fi{#2}}%
395 \set@typeset@protect
396 \verbatimwrite}
397 {%
398 \endverbatimwrite
399 \immediate\closeout \ds@question@write
400 }

```

`\QuesAppearance` `\AnsAppearance` These two commands can be used to change the appearance of the checkboxes for the questions and answers. When the `forpaper web` option is taken, these have no effect.

```

401 \def\QuesAppearance#1{\ds@QuesAppearancetoks={#1}}
402 \def\AnsAppearance#1{\ds@AnsAppearancetoks={#1}}

```

The commands `\dpsQ` and `\dpsA` are the ones that produce the checkboxes, and define the JavaScript actions.

`\afterQhookA` The two commands `\afterQhookA` and `\OnFocusQhookAA` can be redefined for
`\OnFocusQhookAA` additional JS action, the first is a hook into the mouse up action, and the second
is a hook to the on focus action. These two can be redefined as needed, but be
sure to preserve the JS functionality.

```
403 \def\afterQhookA#1{if(PlayerSignIn());}
404 %\let\afterQhookA@gobble
405 \let\OnFocusQhookAA@gobble
```

`\widestFmtdQNum`{*text*} Sets the width of the underlying checkbox for the question.

```
406 \def\widestFmtdQNum#1{\bgroup
407 \settowidth{\@tempdima}{#1}%
408 \ifxetex\advance\@tempdima2.5bp\else
409 \advance\@tempdima.5pt\fi
410 \xdef\Qwidth{\the\@tempdima}\egroup}
411 \widestFmtdQNum{00.}
412 \def\htOfQ#1{\setlength{\@tempdima}{#1}\ifxetex
413 \advance\@tempdima2bp\relax\fi\edef\Qht{\the\@tempdima}}
414 \htOfQ{13bp}
```

Set the checkboxes and JS action for questions. Allow also, changes to appearance
through the `\QuesAppearance` command.

`\dpsQ` Sets the checkbox and content of a question.

```
415 \newcommand{\dpsQ}[1]{\item\relax\ifeqforpaper\else
416 \edef\checkboxTmp{\noexpand\checkbox[\the\ds@QuesAppearancetoks
417 \noexpand\textSize{0}\noexpand
418 \A{\noexpand\JS{activeQuestion = event.target.name;\noexpand
419 \r clearRedCrosses();\noexpand\r\noexpand\afterQhookA{#1}}}%
420 \noexpand\AA{\noexpand\AAOnFocus{\noexpand\JS{%
421 this.resetForm(["ckbxQ"]);\noexpand\r\noexpand
422 \OnFocusQhookAA{#1}}}}]{ckbxQ.#1}{\Qwidth}{\Qht}{Yes}}%
423 \makebox[Opt][r]{\strut
424 \smash{\checkboxTmp}\efKern{-.5pt}{-1.5pt}\enspace}\fi
425 \ignorespaces
426 }
```

Set the checkboxes and JS action for answers. Allow also, changes to ap-
pearance through the `\AnsAppearance` command. This command obeys the
`showanswerlabels` option by re-defining the command `\dpsAitemOptArg`. The
default definition is `\def\dpsAitemOptArg{[]}`, which cancels the display of the
item labels.

`\ltrFmtA`{*fmt-cmds*} When the `showletters` option is in effect, the letters appear amongst
the answers. the letters may be formatted through `\ltrFmtA`. The symbolic `#1`
represents the letter to be formatted; eg, `\ltrFmtA{\textbf{#1}}` give letters in
bold. The default is no formatting.

```
427 \def\ltrFmtA#1{\def\@ltrFmtA##1{#1}}
428 \ltrFmtA{#1}
```

`\widestFmtdALtr`{*text*} Sets the width of the checkbox around the letter. There is a built in with
of 8pt.

```

429 \def\widestFmtdALtr#1{\bgroup
430   \settowidth{\@tempdima}{#1}\ifxetex
431   \addtolength{\@tempdima}{2bp+8pt}\else

668 \penaltypoints{3}

```

```

669 \newcommand{\passing}[1]{\def\dspassing{#1}}
670 \passing{4}

671 \</package>

```

8 Advanced features

One problem when building an interactive puzzle is the lack of space for a rather long or complex question. All of the standard designs leave little space for the questions. Over the years, I've developed two methods to create more space for asking questions: (1) Place the questions in push button appearances; (2) Place the questions in layers (ocgs). In this section we provide define some basic commands to make it "easy" to ask longer question using either of these two methods.

8.1 Icon button appearances

In this case, in some central region we create a series of push buttons, all of which are initially hidden. Push button can have an icon (a graphic) for its appearance. As the student works through the puzzle, the buttons are made visible to pose the question. The question is hidden again as the student moves on to the next question.

For this solution, two files are required: (1) the main puzzle file; and (2) an "icon" file. The next two subsections include commands and environments for each of these two files.

`usebtnappr` To use the icon button approach, the `usebtnappr` must be specified; in this case the package `icon-appr` in input by this package.

Workflow: Creating a finished puzzle is a three step process:

- | | |
|--------------------------|--|
| <code>wrtContent</code> | 1. Compile the puzzle file with the option <code>wrtContent</code> |
| | 2. Compile the <code>icons.tex</code> file to create one or more icons files |
| <code>!wrtContent</code> | 3. Compile the puzzle file with the option <code>!wrtContent</code> |

8.1.1 Macros for the main puzzle document

```
672 \<*btnadv>
```

`setContent{<name>}` (Where `<name>` is the second argument of the `\DeclarePuzzle` data structure.) An environment to set content of the question. The contents of the `setContent` is written verbatim to the file `\jobname-sc(\theenumi).cut`. This obviously assumes the list of questions is in an `enumerate` environment. These individual files are compiled together (in the `icons.tex` file to a PDF of all the questions. The formatting command `\quesNumTxt` is used to format the question header; the default is **Problem** `<num>`. Additionally, `\quesNumTxTPost` that expands immediately after `\quesNumTxt`.

```

\quesNumTxt
\quesNumTxTPost

```

```

673 \newcommand{\quesNumTxt}[1]{\protect\textbf{Problem #1}}
674 \newcommand{\quesNumTxTPost}{\protect\newline}
675 \newenvironment{setContent}[1]{%
676   \immediate\write\@auxout{\string\csarg
677     \string\xdef{\ltrpg#1}{\theenumi}}%
678   \ifwrtContent
679     \def\CommentCutFile{\jobname-sc(\theenumi).cut}%
680     \immediate\openout\CommentStream=\CommentCutFile
681     \begingroup
682     \set@display@protect
683     \let\verbatim@out\CommentStream
684     \dps@IWVO{\quesNumTxt{\theenumi}\quesNumTxTPost}%
685     \set@typeset@protect
686     \expandafter\verbatimwrite
687   \else
688     \edef\x{\noexpand\pl@ceQues{\theenumi}}\x\expandafter
689     \comment
690   \fi
691 }{\ifwrtContent\expandafter
692   \endverbatimwrite
693   \endgroup
694   \immediate\closeout\CommentStream
695 \else
696   \expandafter\endcomment
697 \fi
698 }

```

`\ltrToNum{<num>}` The `setContent` environment above defines a series of commands that associate with each `<name>`, the corresponding problem number (`<num>`).

```
699 \def\ltrToNum#1{\@nameuse{\ltrpg#1}}
```

Embedding commands

`\dpsEmbedIcons` After creating the CUT files, as described in the previous environment, we need to compile the CUT files into one or more PDF(s). This is done in the other `icon.tex` file, described below. The `\dpsEmbedIcons` command goes within the embedding environment

```

\begin{embedding}
\dpsEmbedIcons
\end{embedding}

```

The embedding environment is defined in the `icon-appr` package. `\dpsEmbedIcons` embeds icons images into the puzzle document.

```

700 \def\pglstWarningMsg{\PackageWarningNoLine{dps}
701   {The file icons-pglst.sav not found.\MessageBreak
702   Icons may not appear. Build the\MessageBreak icons.tex file}}
703 \ifrandomize\else\let\pglstWarningMsg\empty\fi
704 \def\dpsEmbedIcons{%
705 \InputIfFileExists{icons-pglst.sav}{\wrtContentfalse}

```

```

706 {\pglWarningMsg\def\pagelist{}}%
707 \edef\TFOR{\noexpand\@tfor\noexpand\n:=\pagelist}%
708 \ifxetex
709   \TFOR\do{\embedIcon[name=Q\n]{icons-\n.pdf}}%
710 \else\ifpdf
711   \TFOR\do{\embedIcon[name=Q\n,hyopts={page=\n}]{icons.pdf}}%
712 \else % pdfmark
713   \TFOR\do{\embedIcon[name=Q\n,placement=btnQ.\n,%
714     page={\n-1}]{icons.pdf}}%
715 \fi\fi
716 }

```

Icon button fields

`\dpsQuesIcon[<opts>]{<num>}{<wd>}{<ht>}` The command that create a push button with an icon appearance. The *<num>* is the question number. The field name is "btnQ.*<num>*"; the value of the `\I` key is an indirect reference to the embedding of the image to be use, the reference is `Q<num>`.

```

717 \newcommand{\dpsQuesIcon}[4] [] {%
718   \pushButton[\Ff{\FfReadOnly}\BG{} \S{S}#1\TP{1}\F{\FHidden}
719     \I{\csOf{Q#2}}\PA{.5 1}]{btnQ.#2}{#3}{#4}}

```

`\dpsOtherIcon[<opts>]{<fieldname>}{<wd>}{<ht>}` There is allowance for displaying additional button images. The

```

720 \newcommand{\dpsOtherIcon}[4] [] {% \I{\csOf{name}} required
721   \pushButton[\Ff{\FfReadOnly}\BG{} \S{S}#1\TP{1}\F{\FHidden}
722     \PA{.5 1}]{#2}{#3}{#4}}

```

Placing the button icons. There are several ways of placing the image buttons; I have use both the `textpos` and the `eso-pic` packages, lately, I've preferred the latter package. Examples of both are contained in the examples.

`\placeQuesIcon{<place> \dpsQuesIcon}` We illustrate

```

\placeQuesIcon{\AddToShipoutPictureFG*{\AtTextCenter{\put(-72,0)
  {\dpsQuesIcon{#1}{2.25in}{9\baselineskip}}}}

```

using the `eso-pic` package. The argument `#1` is eventually the problem number.

`setContent` `\placeQuesIcon` defines a macro `\pl@ceQues`, which appears in the `setContent` environment above.

```

723 \long\def\placeQuesIcon#1{\@ifundefined{textblock}
724   {\let\dps@mode\relax}{\let\dps@mode\par}%
725   \def\pl@ceQues##1{\dps@mode #1}}

```

`\placeOtherIcon{<place> \dpsOtherIcon}` Places an image other than a question.

```

\placeOtherIcon{\AddToShipoutPictureFG*{\AtTextCenter{\put(-72,0)
  {\dpsOtherIcon[\I{\csOf{Emoji}}]{btnEmoji}{2.25in}{9\baselineskip}}}}

```

Both of the above examples are from `examples/advanced/stat_match1.tex`.

```

726 \long\def\placeOtherIcon#1{#1}

```

Define hooks into the question checkbox event. The two commands `\afterQhookA` and `\OnFocusQhookAA` are hooks onto the `\dpsQ` command. This allows us to post process the user's choice of a questions, and allows us to execute JS on focus.

```
727 \def\afterQhookA#1{%
728   if(!event.target.isBoxChecked(0))dpsHideQFields();\r
729   else\pdfSP if(PlayerSignIn())dpsShowQues("\ltrToNum{#1}");}
730 \def\OnFocusQhookAA#1{dpsHidePreviousQues("\ltrToNum{#1}")}
```

Support for a sideshow A sideshow is a tiled picture that is revealed as the player solves the puzzle.

Embedding sideshow graphics

`\dpsEmbedSideShow` [*ext*] {*n-pics*} {*path*} We take a graphic and explode it into rows and columns, *n-pics* is the total number of tiled pictures. We assume the tiles are created row-wise. We assume also a naming convention for the tiles if *mypic* is the base-name of the picture or graphic, then the tiles are named *mypic_01*, *mypic_02*, *mypic_03*, It is assumed a single digit index has a leading 0. Use the command `\sideshowPackaged` prior to `\dpsEmbedSideShow`.

```
731 \newcommand{\dpsEmbedSideShow}[3][[]]{\begingroup
732 % \def\dps@NumSideShowPics{#2}%
733 \gdef\dpsNumSideShowPics{#2}%
734 \def\@Ext{#1}\ifx\@Ext\@empty\def\@Ext{.pdf}\else\def\@Ext{.#1}\fi

782         \presets{\tile@KVs}{btnpic.\x}{#3}{#4}%
783       }% inner multido
784     }% hbox, outer multido
785   \endgroup
786 }
787 </btnadv>

```

8.1.2 Macros for the icon document

The icon document is separate from the puzzle document, so we need to create a special package (icon-doc) for it.

```

788 <*icondoc>
789 \NeedsTeXFormat{LaTeX2e}[1997/12/01]

```

```

790 \ProvidesPackage{icon-doc}
791   [2020/04/21 v1.0 icon-doc:
792   Build Icon file and explode same (dps)]
793 \newif\ifdpsuseacrobat \dpsuseacrobatfalse
xelatex author   The icon-doc package has one option (and one convenience option). Both options
useacrobat      are targeted at users of xelatex. If the xelatex has Acrobat then use the useacrobat
!useacrobat     option; otherwise, use use the !useacrobat option. The default is !useacrobat
                so this option need not appear in the option list. More on the problems of xelatex
                in the description of \@MultiQuesFiles below.
794 \DeclareOption{useacrobat}{\dpsuseacrobattrue}
795 \DeclareOption{!useacrobat}{\dpsuseacrobatfalse}
796 \DeclareOption{twice}{\dpscomptwicetrue}
797 \newif\ifdpscomptwice \dpscomptwicefalse
798 \ProcessOptions\relax
799 \RequirePackage{ifxetex}
800 \RequirePackage{shellesc}
801 \RequirePackage{web}
802 \RequirePackage{eforms}
803 \execJSOn
804 \pagestyle{empty}
805 \parindent0pt \parskip0pt
806 \newwrite \wrtPkg
807 \newwrite\wrticonbody
808 \def\IWB#1{\immediate\write\wrticonbody{#1}}
809 \def\IWP#1{\immediate\write\wrtPkg{#1}}
                Some standard code for writing verbatim to a file.
810 \def\verbatimwrite{\@bsphack
811   \let\do@makeother\dospecials
812   \catcode'\^^M\active \catcode'\^^I=12
813   \def\verbatim@processline{%
814     \immediate\write\verbatim@out
815     {\the\verbatim@line}}%
816   \verbatim@start}
817 \def\endverbatimwrite{\@esphack}

icondoc         Through the icondoc environment, you can set the LATEX document into which
                the question content will be inserted. This environment is only used for the case of
                a xelatex user without Acrobat. The environment writes the is contents verbatim
icons-template  to the file icons-template.tex. This file is later input by \@MultiQuesFiles to
                build individual icon files.
818 \newenvironment{icondoc}
819 {%
820   \immediate\openout \wrticonbody icons-template.tex
821   \let\verbatim@out\wrticonbody
822   \IWB{\string\RequirePackage{tmp}}}%
823   \verbatimwrite
824 }{%
825   \endverbatimwrite

```

```
826 \immediate\closeout \wrticonbody
827 }
```

The prototype, as well as the default definition of `icondoc`, based on `examples/advanced/stat_match1.tex`

```
828 \ifxetex\ifdpsuseacrobat\else
829 \begin{icondoc}
830 \documentclass{article}
831 \usepackage{web}
832 \margins{3pt}{3pt}{3pt}{3pt}
833 \screensize{9\baselineskip}{2.25in}
834 \parindent0pt
835 \begin{document}
836 \small
837 \dpsInputContent % required, defined in \@MultiQuesFiles
838 \end{document}
839 \end{icondoc}
840 \fi\fi
```

During the course of compiling the icon document, we keep track of which questions have an icon. It may be that some questions are short enough to fit in the questions area. `\addToPageList` appearing in both `\@SnglQuesFile` and `\@MultiQuesFiles`. The resulting list `\pageList` is automatically written to the file `icons-pglst.sav` at the end of the icon document.

```
841 \let\pageList\@empty
842 \def\addToPageList#1{\edef\x{#1}}\expandafter
843 \g@addto@macro\expandafter
844 \pageList\expandafter{x}}
```

`\@SnglQuesFile` (An internal command) Under certain conditions, the command publicly known as `\createRequiredIcons`. This command is used for non-`xelatex` users, and by `xelatex` users who use Acrobat.

```
845 \def\@SnglQuesFile#1#2{%
846 \@tempcnta#1\relax\advance\@tempcnta\@ne
847 \edef\N{\the\@tempcnta}%
848 \@tempcnta\@ne\relax
849 \@whilenum\@tempcnta < \N \do{%
850 \begingroup
```

Here is a key point. If the target file does not exist, that means that question does not use an icon appearance, so we create a blank PDF icon and do not register it with `\addToPageList`; otherwise, we do register it with `\addToPageList`.

```
851 \InputIfFileExists{#2-sc(\the\@tempcnta).cut}
852 {\addToPageList{\the\@tempcnta}}{\null}\par
853 \endgroup
```

One icon per page.

```
854 \newpage
855 \advance\@tempcnta\@ne
856 }%
857 }
```

`\@MultiQuesFiles` This command is publicly known as `\createRequiredIcons` when the author is a `xelatex` user who does not have Acrobat.

Problem with xelatex. When it comes to embedding a PDF in the document, `xelatex` does not recognize the `page` key; as a result, the questions must be wrapped in a separate icon file to be later imported into the puzzle document. In all other cases, we can conveniently place a questions in a single icon file, and import a particular page into the document corresponding to the question.

```
858 \def\@MultiQuesFiles#1#2{%
859   \@tempcnta#1\relax\advance\@tempcnta\@ne
860   \edef\N{\the\@tempcnta}%
861   \@tempcnta\@ne\relax
862   \whilenum\@tempcnta < \N \do{%
863     \IfFileExists{#2-sc(\the\@tempcnta).cut}
864     {\addToPageList{\the\@tempcnta}}{}}
```

The above lines are the same as in `\@SnglQuesFile`. Here's where we differ. We begin by creating a temporary package named `tmp` that contains the definition of `\dpsInputContent`.

```
865   \immediate\openout\wrtPkg tmp.sty
866   \IWP{\string\def\string\dpsInputContent{\string
867     \InputIfFileExists{#2-sc(\the\@tempcnta).cut}%
868     }{\string\null}}}%
869   \immediate\closeout\wrtPkg
```

`\ShellEscape` Key to the workflow for the author using `xelatex` without Acrobat is to use `\ShellEscape`. We compile (using `xelatex`) `icons-template` twice, for no apparent reason, followed by renaming the resultant PDF to `icons-⟨num⟩.pdf`, which is the name expected by the puzzle document.

```
870   \ShellEscape{xelatex icons-template.tex}%
871   \ifdpscomptwice\ShellEscape{xelatex icons-template.tex}\fi
872   \ShellEscape{copy icons-template.pdf icons-\the\@tempcnta.pdf}%
873   \advance\@tempcnta\@ne
874   }\null % content for the icons.tex file
```

We finish up by deleting all of working files, including the temporary package `tmp`.

```
875   \ShellEscape{del tmp.sty icons-template.*}%
876 }
```

`\createRequiredIcons{⟨n-ques⟩}{⟨puzzle-basename⟩}` This command creates either a single file containing `⟨n-ques⟩` pages of the required icons, or it creates `⟨n-ques⟩` icon files, each file containing one of the questions. For non-`xelatex` users, we use `\@SnglQuesFile` if the `useacrobat` option is taken, otherwise, we use `\@MultiQuesFiles`. In all other cases, `\@SnglQuesFile` is used.

```
877 \ifxetex
878   \ifdpsuseacrobat
879     \let\createRequiredIcons\@SnglQuesFile
880   \else
881     \let\createRequiredIcons\@MultiQuesFiles
882   \fi
```

```

883 \else
884 \let\createRequiredIcons\@SnglQuesFile
885 \fi

```

This JavaScript is used by xelatex users who have Acrobat. I should mention, this code assumes the document author has `aeb_pro` installed, including, most importantly, the correct installation of `aeb.js` and `aeb_pro.js`.

```

aeb.js & aeb_pro.js
886 \begin{defineJS}[\def\defineJSjsR{^^J}]{\execExplode}
887 /* Extract pages to folder */
888 // Regular expression used to acquire the base name of file
889 try {
890 for (var i = 0; i < this.numPages; i++)
891 aebTrustedFunctions(this,aebExtractPages,{
892 nStart: i,
893 cPath: "icons-" + (i+1) + ".pdf"
894 });
895 } catch (e) { console.println("Aborted: " + e); }
896 \end{defineJS}

```

Write the file `icons-pglst.sav` at end of the document.

```

897 \def\wrtPageList{\newwrite\pagelist
898 \immediate\openout \pagelist icons-pglst.sav
899 \immediate\write\pagelist{\string\def\string\pagelist{\pageList}}
900 \immediate\closeout\pagelist
901 }

```

One last case for xelatex users. If the author has Acrobat, we “explode” the single icon document into into its individual pages with the correct naming convention.

```

902 \ifxetex\ifdpsuseacrobat
903 \begin{execJS}{expl}
904 \execExplode
905 \end{execJS}
906 \fi\fi

```

Finally, we write `icons-pglst.sav` and the end of the document.

```

907 \AtEndDocument{\wrtPageList}
908 \let\WriteBookmarks\relax

```

```

909 </icondoc>

```

8.2 OCG methods

Using OCG methods does not require an “`icons.tex`” file, the puzzle file is entirely self contained. The questions are typeset into their own layer, which we make visible or invisible, depending on the question selected. We require the `aeb_pro` package (with its `uselayers` option) to be properly installed with its JS files, as described in the manual of that package. In the preamble you can conveniently type,

```
\usepackage{%
```

```

web={pro,tight},
eforms,
uselayers
]{aeb_pro}

```

910 `<*ocgadv>`

Define hooks into the question checkbox event. The two commands `\afterQhookA` and `\OnFocusQhookAA` are hooks onto the `\dpsQ` command. This allows us to post process the user's choice of a questions, and allows us to execute JS on focus.

```

911 \@ifpackageloaded{textpos}{\let\dps@mode\par}{\let\dps@mode\relax}
912 \def\afterQhookA#1{%
913   if(!event.target.isBoxChecked(0))dpsHideLayer("#1");\r
914   else\pdfSP if(PlayerSignIn())dpsShowLayer("#1");}
915 \def\OnFocusQhookAA#1{dpsHidePreviousLayer("#1")}

```

Parse the argument (`<name>-<num>`) to get the `<name>`.

```

916 \def\dps@getOCGName#1-#2\@nil{\def\dps@OCGName{#1}}

```

`\fmtOCGQues{<various>}` Use this command to format the question layer. Within the argument of `<various>` you should place `\dpsQuesLayer{#1}`, which input the content file `\jobname-sc(#1).cut`. The following two examples use `eso-pic` and `textpos` packages respectively.

```

\fmtOCGQues{% eso-pic pkg
  \parbox[t][9\baselineskip][t]{2.25in}{\kern0pt\small\hfuzz11pt
  \psshadowbox[framesep=0pt]{\fcolorbox{red}{cornsilk}{%
  \parbox{\linewidth}{\dpsQuesLayer{#1}\vskip3pt}}}}

```

```

\fmtOCGQues{% textpos pkg
  \parbox[t][9\baselineskip][t]{2.25in}{\kern0pt\small\hfuzz11pt
  \psshadowbox[framesep=0pt]{\fcolorbox{red}{cornsilk}{%
  \parbox{\linewidth}{\dpsQuesLayer{#1}\vskip3pt}}}}

```

```

917 \def\fmtOCGQues#1{\def\fmtOCGQues@i##1{#1}}

```

`\dpsQuesLayer{<name>-<num>}` Inputs the appropriate content file. The command is placed in the `\fmtOCGQues` and its argument remains symbolic (`\dpsQuesLayer{#1}`), as seen in the examples above. The argument is never specified explicitly, but is only symbolically referenced with the `\placeQuesLayer` command; for example,

```

\placeQuesLayer{% eso-pic pkg
  \AddToShipoutPictureFG*{\AtTextCenter{\put(-72,72)
  {\insertQuesLayer{#1}}}}

```

```

\placeQuesLayer{% textpos pkg
  \begin{textblock*}{2.25in}[0,0](2.5in+.725in,3in)
  \insertQuesLayer{#1}
  \end{textblock*}

```

```

918 \def\dpsQuesLayer#1{\input{\jobname-sc(#1).cut}}

```

`\placeQuesLayer` $\langle various \rangle$ Use this command to place your question content on the page. The argument $\langle various \rangle$ depends on the package used (`eso-pic` or `textpos`). Examples are shown above under `\dpsQuesLayer`.

```
919 \long\def\placeQuesLayer#1{\@ifundefined{textblock}
920   {\let\dps@mode\relax}{\let\dps@mode\par}%
921   \def\pl@ceQuesL@yer##1{\dps@mode #1}}
```

`\placeOtherLayer` $\langle various \rangle$ A general purpose command for creating another layer, not associated with a question. The $\langle various \rangle$ argument is roll-your-own for inserting a graphic in a layer with a specific name. For example,

```
\placeOtherLayer{% eso-pic pkg
  \AddToShipoutPictureFG*{\AtTextCenter{\put(-72,36)
\xBld{owclogo}\parbox{2.25in}
  {\includegraphics[width=\linewidth]{owc_self}}\eBld}}}
```

The above creates a layer named `owclogo` consisting of a graphic. The placement is indicated as well.

```
922 \long\def\placeOtherLayer#1{#1}
```

`\insertQuesLayer` $\langle name \rangle$ - $\langle num \rangle$ Places the formatted question content (`\fmtOCGQues@i`) within a layer created by the `\xBld`/`\eBld` pair, the layer's name is $\langle name \rangle$ (parsed as `\dps@OcgName`).

```
923 \def\insertQuesLayer#1{\dps@getOCGName#1\@nil
924   \edef\x{\noexpand\xBld{\dps@OcgName}}\x
925   \fmtOCGQues@i{#1}\eBld}
```

`\quesNumTxt` `\quesNumTxTPost` and `\quesNumTxTPost` are the same, as described for button icon appearances.

```
926 \newcommand{\quesNumTxt}[1]{\protect\textbf{Problem #1}}
927 \newcommand{\quesNumTxTPost}{\protect\newline}
```

`setContent` $\langle name \rangle$ The `setContent` is the counterpart to the environment of the same name for button icon appearances. It performs a similar function, but yet is different. The `setContent` environment is placed within the `cQ` environment. The `setContent` follows the question prompt.

```
928 \newenvironment{setContent}[1]{%
929   \gdef\scArg{#1}% save the argument for the end env
```

The `\jobname-sc` CUT file is indexed by $\langle name \rangle$ -`\theenumi`. Thus, we have the $\langle name \rangle$ and problem number available to us.

```

8.2.1 Support for a sideshow

`\insertSideshow[<ext>]{<rows>}{<cols>}[<hy-opts>]{<path>}` Command for placing the tiles of the picture. We assume that the pictures are numbered consecutively across rows.

<ext> optional extension of the image
<rows> number of rows
<cols> number of columns
<hy-opts> optional arguments for the `\includegraphics` command
<path> base name of picture files (The files are indexed as follows: mypic_01, mypic_02, mypic_03, The basename is mypic, the underscore is added in by this command.

Usage:

```
\insertSideshow{3}{2}[width=.5\linewidth]{flowers2/rose}
```

```

944 \newcommand{\insertSideshow}[3][\begingroup
945 \def\@Ext{#1}\ifx\@Ext\@empty\else\def\@Ext{.#1}\fi

10 Form and document actions

`\printPDF[<opts>]{<wd>}{ht}` Opens the print dialog box, pre-populates some print parameters.

```

1033 \newcommand{\printDPS}[3] [] {%
1034 \pushButton[\CA{Print}\A{\JS{%
1035 var pp = this.getPrintParams();\r
1036 pp.firstPage=1;\r
1037 pp.lastPage=1;\r
1038 pp.pageHandling = pp.constants.handling.shrink;\r
1039 var fv = pp.constants.flagValues;\r
1040 pp.flags |= (fv.suppressCenter | fv.suppressRotate);\r
1041 this.print(pp);}]#1]{printDPS}{#2}{#3}%
1042 }

```

`\resetPDF[<opts>]{<wd>}{ht}` Clears the puzzle board.

```

1043 \newcommand{\resetDPS}[3] [] {%
1044 \pushButton[\CA{Clear}\A{\JS{resetDPS();}}#1]{resetDPS}{#2}{#3}%
1045 }

```

`\clearOnCloseOrSave` Try to prevent the student from saving the game (for some other student) we clear the game board if either student closes or save the document.

```

1046 \def\dpsWCSWrnMsg{The file dps-wcs.def could not be found}
1047 \newcommand{\clearOnCloseOrSave}{\InputIfFileExists{dps-wcs.def}{}}
1048 {\PackageWarning{dps}{\dpsWCSWrnMsg}}

1049 \</package>
1050 \*willCloseSave)

```

This is the mechanism for preventing the student from saving the document and continuing at a later time. When the student tries to save or close the document, the entire puzzle board is cleared.

```

1051 \begin{willClose}
1052 resetDPS();
1053 \end{willClose}
1054 \begin{willSave}
1055 resetDPS();
1056 \end{willSave}
1057 \</willCloseSave)

```

11 JavaScript Support

11.1 JavaScript common to all options

```

1058 \*package)
1059 \def\lngthOfMsg{2000} % in milliseconds

1106   } else { // wrong
1107     if ( activeQuestion != "" )
1108       var h = this.getField(activeQuestion);
1109     if ( ( activeQuestion=="") || ( h.readonly ) ) {
1110       // active question already answered
1111       event.target.value = "Off";
1112       var g = this.getField("report");
1113       str = \chooseQ;
1114       g.value = str;
1115       var to = app.setTimeout("clearMessages()", \lengthOfMsg);
1116     } else {
1117       event.target.style = style.cr;
1118       event.target.textColor = color.red;
1119       ++nMissed;
1120       if ( typeof missesByQuestion[activeQuestion] != "number" )
1121         missesByQuestion[activeQuestion] = 1;
1122       else
1123         missesByQuestion[activeQuestion] += 1;
1124       if ( missesByQuestion[activeQuestion] > \dsthreshold ) {

```

```

1125         var f = this.getField("report");
1126         str = \triedTooMuch;
1127         f.value = str;
1128         nPenaltyPoints += \dspenaltypoints;
1129         missesByQuestion[activeQuestion] = 0;
1130         clearRedCrosses ();
1131         var to = app.setTimeout("clearMessages()", \lengthOfMsg);
1132     }
1133 }
1134 }
1135 }

```

`clearMessages()` Clears the text field named `report`, which is created by `\placeMessageField`.

```

\placeMessageField 1136 function clearMessages()
1137 {
1138     var f = this.getField("report");
1139     f.value = "";
1140 }

```

`clearRedCrosses()` Clears all answer check boxes what are marked with a cross, meaning wrong choice. Part of the mouse up action question check boxes.

```

1141 function clearRedCrosses ()
1142 {
1143     var g = this.getField("ckbxA");
1144     h = g.getArray();
1145     for ( i=0; i < h.length; i++) {
1146         if ( h[i].style == style.cr) h[i].checkThisBox(0,false);
1147         h[i].style = style.ch;
1148     }
1149 }

```

`checkForFinished()` Determines if all questions have been answered. Called from `processChoice()`.

```

1150 function checkForFinished()
1151 {
1152     var f = this.getField("puzzle");
1153     var g = f.getArray();
1154     var anyEmpty = false;
1155     for ( var i=0; i < g.length; i++) {
1156         if ( (g[i].name != "puzzle.space") && %
1157 (g[i].value.replace(/s/g,"") == "") ) {
1158             anyEmpty = true;
1159             break;
1160         }
1161     }
1162     var nTotalPenaltyPoints=nMissed + nPenaltyPoints;
1163     if ( !anyEmpty ) {
1164         try { dpsFinishedHook() } catch (e) {};
1165         var f = this.getField("report");
1166         str = \congratFinished
1167         + "\n" + \regretPleased
1168         + "\n" + \reportPenaltyPoints
1169         + "\n" + \finalPenaltyScore

```

```

1170         + " " + finalRating(nTotalPenaltyPoints);
1171         f.value = str;
1172     }
1173 }

```

`finalRating(penalty-points)` A function that returns a message string from the array (`\aPenaltyMsgs`) of penalty messages. Choice of messages is based on where the value (*penalty-points*) falls into the penalty scale array (`\aPenaltyScale`). This function is called from `checkForFinished()`.

```

1174 function finalRating(n) {
1175     var aPenaltyScale = new Array( \aPenaltyScale\space);
1176     var aPenaltyMsgs = new Array( \aPenaltyMsgs\space);
1177     for ( var i=0; i<aPenaltyScale.length; i++)
1178         if ( (n > aPenaltyScale[i][0]) && (n <= aPenaltyScale[i][1]) )
1179             return aPenaltyMsgs[i];
1180 }

```

`resetDPS()` A JavaScript function to reset the puzzle board. May be used as a push button action or within the `willClose` and `willSave` environments.

```

1181 function resetDPS() {
1182     this.delay=true;
1183     this.resetForm();
1184     var f=this.getField("puzzle");
1185     var g=f.getArray();
1186     for (var i=0; i<g.length; i++)g[i].value="";
1187     var f=this.getField("ckbxQ");
1188     f.strokeColor=QBC;
1189     var g=f.getArray()
1190     for (var i=0; i<g.length; i++)g[i].readonly=false;
1191     var f=this.getField("ckbxA");
1192     var g=f.getArray();
1193     for (var i=0; i<g.length; i++)g[i].readonly=false;
1194     this.dirty=false;
1195     if(typeof(xBlds)!="undefined"){
1196         for (var i=0; i<xBlds.length; i++) {
1197             var bName=xBlds[i].name.substring(3);
1198             toggleSetThisLayer(bName,false);
1199         }
1200     }

```

Hide any form fields with base name of `btnpic`.

```

1201     var f=this.getField("btnpic");
1202     if(f!=null)f.display=display.hidden;
1203     try {

```

`\dpsresethook` The hook (`\dpsresethook`) to add code lines during the reset.

```

1204     \dpsresethook
1205     if (typeof mixupDPS == "function") {
1206         mixupDPS();
1207         showDPS();
1208     }
1209 } catch(e){};

```

```

1210 playerSignedIn = false;
1211 missesByQuestion = new Object();
1212 nMissed = 0;
1213 nPenaltyPoints = 0;
1214 activeQuestion = "";
1215 aPicIndex=randomizePicList(aPicIndex,bRandPicMaps);
1216 if(bRandPicMaps)assignNamesToIndexes();
1217 this.delay=false;
1218 }

```

11.1.1 JavaScript to support a sideshow

```

1219 /*
1220     Create mapping from letters to pictures
1221 */
1222 var aPicIndex=[\DPSIndxList];
1223 var aNamesList=[\DPSNamesList];
1224 var diff;
1225 var Plength=aPicIndex.length;
1226 var Nlength=aNamesList.length;
1227 if ( (diff=Nlength-Plength) > 0 )
1228     for (var i=0; i<diff; i++)
1229         aPicIndex.push(null);
1230 // now randomize aPicIndex, if requested
1231 aPicIndex=randomizePicList(aPicIndex,bRandPicMaps);
1232 // now make assignments
1233 assignNamesToIndexes();
1234 function assignNamesToIndexes() {
1235     for(var i=0; i< Nlength; i++)
1236         pic[aNamesList[i]]=aPicIndex[i];
1237 }
1238 function randomizePicList(array, bRandomize) {
1239     if (bRandomize) shuffle(array);
1240     return array;
1241 }

```

The shuffle function was obtained from [stackoverflow](https://stackoverflow.com/questions/2450954/how-to-randomize-shuffle-a-javascript-array).¹

```

1242 function shuffle(array) {
1243     var currentIndex = array.length, temporaryValue, randomIndex;
1244     // While there remain elements to shuffle...
1245     while (0 !== currentIndex) {
1246         // Pick a remaining element...
1247         randomIndex = Math.floor(Math.random() * currentIndex);
1248         currentIndex -= 1;
1249         // And swap it with the current element.
1250         temporaryValue = array[currentIndex];
1251         array[currentIndex] = array[randomIndex];
1252         array[randomIndex] = temporaryValue;
1253     }
1254     return array;

```

¹stackoverflow.com/questions/2450954/how-to-randomize-shuffle-a-javascript-array

```
1255 }
1256 \end{insDLJS}
```

11.2 JavaScript for the usebtnappr option

```
1257 \ifusebtnappr
1258 \begin{insDLJS}{dpsbtnappr}{DPS: Icon appearance support}
```

`dpsShowQues(num)` Part of the mouse-up action of the question check boxes. The function displays the hidden appearance icon for this question.

```
1259 function dpsShowQues(n)
1260 {
1261   if (PlayerSignIn()) {
1262     dpsShowFld("btnQ."+n);
1263     % var f=this.getField("btnQ."+n);
1264     % if (f!=null) f.display=display.visible;
1265   }
1266 }
```

`dpsHideQFields()` Hides all icons fields with parent name of `btnQ`.

```
1267 function dpsHideQFields() {
1268   dpsHideFld("btnQ");
1269   % var f=this.getField("btnQ");
1270   % f.display=display.hidden;
1271 }
```

`dpsHideFinalField(name)` Hides the additional field that is displayed after player finishes. Typically this function is fired by the document author during the `dpsReset()` function.

`\dpsResetHook` Modification to this function are through the `\dpsResetHook` helper macro. For example,

```
\dpsResetHook{%
  dpsHideQFields();
  dpsHideFinalField("btnEmoji");
}
```

Here, we hide all fields and hide the "btnEmoji" graphic.

```
1272 function dpsHideFinalField(name){
1273   dpsHideFld(name);
1274   % var f=this.getField(name);
1275   % if (f!=null)f.display=display.hidden;
1276 }
```

`dpsHidePreviousQues()` This function actually hides all fields, but only if there is an active question.

```
1277 function dpsHidePreviousQues()
1278 {
1279   if ( activeQuestion != "" ) {
1280     dpsHideQFields();
1281   }
1282 }
1283 function dpsShowFld(name) {
1284   var f=this.getField(name);
1285   if (f!=null)f.display=display.visible;
```

```

1286 }
1287 function dpsHideFld(name) {
1288   var f=this.getField(name);

1292   %% var name = activeQuestion.replace(/ckbxQ\./,"");
1293   %% var name = displayPic.name;
1294   % console.println("name: "+name);
1295   % console.println("pic[name]: "+pic[name]);
1296   if (pic[name] != null )dpsShowFld("btnpic."+pic[name]);
1297 }

```

`afterCorrectChoiceHook()` After a correct answer, we hide all icon fields to get ready for the next question or final icon.

```

1298 function afterCorrectChoiceHook()
1299 {
1300   var name = activeQuestion.replace(/ckbxQ\./,"");
1301   dpsHideQFields();
1302   displayPic.name=name;
1303   _dpsT0=app.setTimeout("displayPic('"+name+"'",25);
1304 }

```

`dpsFinishedHook()` This function fires when all questions have been answered. Called from `checkForFinished()`. This function executes a document authored function, `\dpsfinishedevent` `dpsfinishedevent`, if there is one defined.

```

1305 function dpsFinishedHook()
1306 {
1307   dpsHideQFields();
1308   try {
1309     \dpsfinishedevent
1310     if(typeof sortoutDPS == "function") {
1311       ok2Continue = true;
1312       sortoutDPS();
1313     }
1314   }catch(e){}
1315 }
1316 \end{insDLJS}

```

Bubble sort the pics if `\sortPicMappings` is expanded in the preamble.

```

1317 \end{package}
1318 \sortjs
1319 \begin{insDLJS}{dpssort}{DPS: Bubble Sort}

11.3 JavaScript for the uselayers option

We define similar functionality as described in Section 11.2.

```

1418 \ifuseocgapp
1419 \begin{insDLJS}{dpslayer}{DPS: Layer Support}

```

`dpsShowLayer(<name>)` Show the layer with a name of `<name>`. The JavaScript function `toggleSetThisLayer toggleSetThisLayer()` is defined in `aeb_pro` with the `uselayers` option.

```

1420 function dpsShowLayer(name)
1421 {
1422     toggleSetThisLayer(name, true);
1423 }

```

`dpsHidePreviousLayer()` Hides this previous layer, as recored by `activeQuestion`. The value of `activeQuestion` is of the form `ckbxQ.<name>`. We strip off the first 6 letters in this string.

```

1424 function dpsHidePreviousLayer()
1425 {
1426     if ( activeQuestion != "" ) {
1427 %       var activename = activeQuestion.replace(/ckbxQ\./,"");
1428       var activename=activeQuestion.substring(6)
1429       dpsHideLayer(activename);
1430     }
1431 }

```

`dpsHideLayer(<name>)` Hide the layer with a name of `<name>`. The function `toggleSetThisLayer()` `toggleSetThisLayer` is defined in `aeb_pro` with the `uselayers` option.

```

1432 function dpsHideLayer(name)
1433 {
1434     toggleSetThisLayer(name, false);
1435 }

```

`afterCorrectChoiceHook()` A function that fires after a correct answer is registered.

```

1436 function afterCorrectChoiceHook()
1437 {
1438     var name = activeQuestion.replace(/ckbxQ\./,"");
1439     try {
1440         Used for special effects.
1441         if (pic[name] != null )
1442             dpsShowLayer("pic"+pic[name]);
1443     } catch(e) {};
1444     dpsHideLayer(name);
1445 }

```

`dpsFinishedHook()` This function fires when all questions have been answered. Called from `checkForFinished()`. This function executes a document authored function, `\dpsfinishedevent` `dpsfinishedevent`, if there is one defined.

```

1445 function dpsFinishedHook()
1446 {
1447     var name = activeQuestion.replace(/ckbxQ\./,"");
1448     dpsHideLayer(name);
1449     try {
1450         \dpsfinishedevent
1451     }catch(e){}
1452 }
1453 \end{insDLJS}
1454 \fi
1455 \dps@restoreCats

```

```
1456 \let\WriteBookmarks\relax
1457 \end{package}
```

12 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in *roman* refer to the code lines where the entry is used.

13 Change History

| | | | |
|--|----|--|--|
| v1.0 (2006/10/31) | | | |
| General: Added the <code>showanswerlabels</code> option ... | 3 | | |
| <code>\DeclarePuzzle</code> : Added a token list to hold any user changes in the appearance of the puzzle, as as suggested by Robert Marik. | 9 | | |
| v1.1 (2020/04/21) | | | |
| General: Added <code>\setdpsfootskip</code> | 13 | | |
| Added <code>\widestFmtdNum</code> to set width of the checkbox for questions | 16 | | |
| Added <code>resetDPS()</code> JavaScript function. | 40 | | |
| Replace <code>tabular*</code> with <code>tabular</code> in <code>\insertPuzzle</code> | 11 | | |
| cA: Modified cA, using <code>\set@display@protect</code> and <code>\set@typeset@protect</code> | 15 | | |
| <code>\DeclarePuzzle</code> : Added <code>\wdPuzzleFields</code> and <code>\htPuzzleFields</code> | 9 | | |
| <code>\dpsQ</code> : Added <code>\ltrFmtA</code> to format the answer letter | 16 | | |
| cQ: Modified cQ, using <code>\set@display@protect</code> and <code>\set@typeset@protect</code> | 14 | | |
| <code>\writeComposingEnv</code> : <code>\writeComposingEnv</code> no longer needs to be followed by <code>begin</code> and <code>end</code> document | 19 | | |
| v1.5 (2020/08/06) | | | |
| General: Support for packaged sideshow graphics | 26 | | |

v1.6 (2020/05/31)

General: Improved parsing for `punc` and `cr` 11

v1.7 (20/06/03)

General: Changing from `\wrtContentfalse` as

the default to `\wrtContenttrue` as the
default. 4

Detect if `icons-pglst.sav`, if yes set

`\wrtContentfalse` 5
